AMOS & AMOS Compiler updaters version 1.34 5/3/92

These updaters will modify the AMOS Programs disc and AMOS Compiler disc so that they become V1.34. Both AMOS and Compiler will then be synchronised to the latest version.

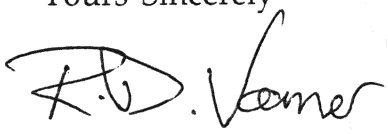
Beware that the updaters remove files from the discs to make room for the update - so only update copies of your masters.

These versions should prove very stable but if you do find a program that doesn't work either in the interpreter or once compiled please send it in to me.

Some of you will already have the AMOS1.34 interpreter but not the doc files that explain what's new. So read it and learn! You should also be aware of the fact that the update saves out a few new files, one of which shows you how to run another application from AMOS, so it's well worth doing the update to grab these new programs.

Thanks for your continued support of AMOS and keep churning out those programs!

Yours Sincerely



Richard Vanner
Projects Manager
